IMPACT OF WORK-LIFE BALANCE ON EMPLOYEE JOB SATISFACTION

Pragati Neura - Student, MBA- Semester IV
Dr. Roopam Jain Hazra - Assistant Professor
Faculty of Commerce and Management, Kalinga University, C.G.

ABSTRACT:

Work-life equilibrium is getting harder to maintain these days. Work is really central for corporates to do well in today's fast paced and competitive world. This says humans working should manage their jobs and personal life like family friends and taking care of themselves properly. It is becoming very very difficult to balance work and life because jobs are getting more complicated and demanding everyday. It is central for people to be happy and done their work well. This work touch at how task life equilibrium impact how joyful individuals are with their work. It talks about how companies and individuals can help make this balance happen. Things like remote work option flexible working hours supportive place of work culture not overloading employees and taking care of outer and mind health are all very important. Companies that are flexible and care about their workers support them equalize work and life which reduces stress and prevents burnout. Work life equalization is crucial for employee happiness and for companies to be successful. The work output torched that when employees able to obtain good task life equilibrium they feel less stressed and anxious more motivated and more oriented to organization. These persons working tend to be higher motivated committed and fulfilled with their task which finally betterments organizational output. On other side scarcity of task life equilibrium can cause in job dissatisfaction low productivity and high employee turnover.

Keywords: *stress management, organizational support, work-life balance, job satisfaction, employee well-being.*

Introduction

In today world many person working who do having very hard time balancing their job and life. Because of globalization corporate working trade over globe and people under huge of pressure to perform well (Guest, 2002) and get things done very quickly. Workers have to finish tasks on time do multiple things at once and always be connected to work using technology (Derks & Bakker, 2013). This can be decent for getting work done but it also create it very hard for individuals to pause projecting about tasks infect when they not at office.

Task life equilibrium means ability to handle task and lifestyle at same time (Greenhaus et al., 2003). This very very important for being happy healthy and for doing job well and feeling satisfied with it in long run. Job satisfaction about how joyful people with their work and workplace. It thing that depend on many factors like work environment salary chances for promotion support from colleagues bosses and company culture. When people not happy with job they feel unhappy have low morale and more likely leave company.

These days companies starting realize how important for humans working to get excellent equilibrium between task and life (Beauregard & Henry). They trying help employees by giving flexible schedules work from home options and programs for stress management and health. When companies do this employees become happier work better and more loyal to company.

When people not have good equilibrium between task and lifestyle it can be very bad for them and for company. Working too much heavy workload and huge stress can make people feel completely burned out. This not just worse for individuals working but also for company because it make people less productive less motivated and less happy with job.

1. Literature Review and Research Gap

Task and lifestyle equilibrium is central for individuals working (Greenhaus et al., 2003). It help company they are employed in to do well. These days it is harder than ever to balance task and life. Still it very important. When people have equality in task and life they can deal with demands of job and living better (Grywacz & Marks, 2000). Task-lifestyle equilibrium help people sense goodness and joyful with their jobs (Noor, 2011). It also help them manage time and energy. When they have authority over their task life. This why companies should let people do mobile work or have flexible hours. It also help if companies support their employees and not force them huge amount of task (Kossek & Ozeki, 1998). When people feel supported and don't have large amount of task they less stressed and happier.

Work-life balance is also important for people's health. When human invest time with family and friends they feel good. This makes them happy and motivated at work. When humans have social life they mostly work well with others and arrive with new ideas. They get less sick or want to quit their job.

Majority of work have torched that when people have a work-life balance they work better and the business do better (Beauregard & Henry, 2009). Corporate that think about their human resources work-life equilibrium are more successful (Bloom et al., 2011). Having people who are joyful and want to work hard. When employees are happy the firm is extra likely to do in the large timeframe. When companies do not care about life balance they have problems. Their employees are unhappy. Do not desire to work hard. This can hurt the company. Cause it lower successful.

Work flexibility and support from the company are important for work-life balance. Things like ability to do mobile work or having a schedule support individuals organize their task and life. Support from the company like having a work culture and not too much work also helps. When corporate think about their HR they mostly have employees who work hard. In last work-life balance is very central. It supports individual and companies do well. Companies ought to try to help their employees have a work-life balance. This will create their employees happy. The company will be huge successful company.

2.1 Research Gap

A lot of debate about task-life equilibrium and job joyfulness is there. Some things ought to be looked at more closely. The information we have now might be old. Not show what is happening with things such as mobile work and using computers all the time. We also have lower knowledge about how work-life balance affects people like men and women or people of different ages and jobs. Most of research we have is from short period of time and does not look at what happens over long long time. Task-life equality and job joyfulness are affected by things like techno stress. Always being connected to our phones and computers all time. We ought to do more research on task-life equality and job joyfulness to get good comprehension of what going on. This will help us view how task-life equilibrium impact job joyfulness in complete way.

2. Research methodology

This study looks at link between task life equilibrium and employee task satisfaction in detailed and organized way. Study uses research design because it wants to see and comprehend link between task-life equality and

employee task joyfulness without changing anything (Kothari, 2004). This way of doing things very good for understanding what happening in real world and for finding patterns and relationships in organizations.

To get understanding of difficulty this work uses both information collected directly and information already available. Direct information collected by giving questionnaires to employees in organizations (Saunders et al.). This way study gets information from employed persons about what is felt by them about work life equality and how it affect their task joyfulness.

Work also uses information that already available from books research papers and other credible sources. This information help study understand theory behind task life equality and job joyfulness and how it fits into what already known.

By using both kinds of information study become more reliable. It can look at difficulty from multiple areas (Creswell, 2014). This approach help study get understanding of topic and support findings of study. Study is about task-life harmony and peoples job satisfaction. It looks at how task-life harmony impact employee job satisfaction.

3. Research Design

This work utilizes an approach to see at the joint between task-life equality and peoples job joyfulness. We chose this approach because it lets us describe and analyze things as they are without changing them. This way we can see what is really happening in office. The structure of this work helps us comprehend what is working now. It provides us a clear real picture of workplaces.

We utilize this kind of research to see at things like working hours and workload and how they impact employees. It helps us view connection of one to other and in what manner they impact employees. This research also helps us collect data from employees so we can comprehend their feeling. We want such work since it is organized and methodical. We use things like questionnaires to collect data from employees in their workplaces. This create our outputs extra reliable. It helps us make informed conclusions, about work-life balance and job satisfaction. Overall using this approach means we can do an unbiased study and that creates our work extra valid and relevant.

a. Data Collection Method

In this work we arranged numbers and facts from 2 points to see how work-life balance affects job satisfaction. The first type of data came from employees of different companies through surveys and questionnaires (Saunders et al., 2019). We questioned them about their engaged hours how work they had if their organization supported them and if they were joyful with task. This helped us get information directly from the people who experience it every day. The questions were easy to understand so we got answers. The data we collected showed what employees really think and feel about balancing work-life. It also gave us a view of what's happening in workplaces. The second type of data came from sources like research papers, journals, books, reports and online databases. This helped us understand the theory, behind work-life balance and job satisfaction. It also supported what we found out from the employees.

b. Data type

In given work we utilized both new and available data to get complete picture how task-life equilibrium impact employee job satisfaction. Primary data is information we collected directly from people taking part in study (Saunders et al.,). We got this data by giving surveys and questionnaires to employees. This kind of data considered accurate because it shows what people felt about their task life equality and job satisfaction right now in present time.

We also utilized available figures and facts which is information someone have already published somewhere. For this study we found data in journals research articles books reports and good website. We used this data to learn about ideas that already out there to see what we found in context of what other torched before and to add to our analysis.

c. Data gathering technique

Research used organized way to collect data. It used two kinds of data collection methods getting information that already exists. For primary information study used surveys with questionnaires (Kothari). These questionnaires sent to pool of working ones from different companies to find out about their equality between task and lifestyle and how happy they with their jobs. Questionnaires written in way so they easy to understand and answer. This method helped to get information from people taking part in study which made it possible to hear about their real experiences and thoughts. For existing information study used methods like reading and

analyzing what other have torched about topic. Figures arranged from areas like academic journals research papers books and reports. These sources chosen because they relevant trustworthy and accurate.

d. Method of sampling

This study used way to gather figures and facts from who were easy to reach. Person who took part in research selected since their availability (Sekaran & Bougie). We did this because it saved time and we could get to people from companies easily. Employees from different types of businesses asked to fill out questionnaire which helped us get different opinions on how to equalize task and life and how happy they with their jobs. This way of choosing people to work in study is not perfect because it does not give every person chance to be included. It nice manner to do things when we need collect information quickly and easily and we only working to learn more about something. We also got information from sources like journals books and reports without choosing specific ones. These chosen for their relevance and credibility to keep standard of study.

4. Hypothesis Framework:

This research applies hypothesis testing to check the link in work-life balance and task joyfulness. Analysis of correlation will be used to examine the nature and magnitude of this association.

Null Hypothesis (H_0): There is no central link between task–life equality and job joyfulness.

Alternative Hypothesis (H_1): There exist central link between task–life equality and task joyfulness.

a. Correlation Analysis

Table 1: Correlation Analysis estimates

Variables	Work-Life Balance	Job Satisfaction
work-life balance	1.000	0.650
Job satisfaction	0.650	1.000
Significance level	—	0.002
Sample size(N)	50	50

Source: Primary data organizing.

The analysis of correlation torched existence of non-negative link between task-life equilibrium and task joyfulness. The correlation coefficient is 0.65, which points there is a good relationship. Significance level is 0.002 and this is below 0.05. This says that this result is significant and not by chance.

b. Regression Analysis

Table 2: Regression Analysis estimates

Factor	Value
R (Relationship)	0.65
R Square	0.42
Regression Coefficient(B)	0.75
Significance Level	0.002

Source: Primary data analysis.

Regression analysis demonstrates there is link between task-life harmony and task joyfulness. The R Square value (0.42) indicates that 42% of job joyfulness is defined by task life equalization. The B value (0.75) points that for each point rise in work life balance there are increment in job joyfulness. The significance level (0.002) means that result is highly significant.

Hypothesis Testing

Analysis of regression and correlation were utilized to check hypothesis. Outcome points that significance value (0.002) is smaller than desirable level of 0.05. So null hypothesis (H0) that there is no link between task life equality and job joyfulness is rejected. We welcome hypothesis alternative (H1). This points existence of good link between task life equalization and job joyfulness.

5. Data analysis

This study looks at information from peoples work like journals and articles to see what it says about task and life. We desired to see if there is link between task and life and being happy with job. So we torched at things like how much work people have to do if they have flexible hours if their company helps them if they are stressed and if they are joyful with task.

To make it easier to understand what we found we put the information into tables:

Table 3: Demographic Profile of Respondents

Demographic variable	Category	No. of Respondents	Percentage (%)
Age group	20-25 years	18	36%
	26-30 years	16	32%
	31-35 years	10	20%
	Above 35 years	6	12%
Gender	Male	28	56%
	female	22	44%
Work Experience	< 1 year	12	24%
	1-3 years	20	40%
	3-5 years	10	20%
	> 5 years	8	16%
Employment Type	Full time	34	68%
	Part time	10	20%
	Contractual	6	12%

Source: Primary data collected through survey

The table below provides the respondents' profile. The age group of 20-25 is the most represented (36%) among the sample, which suggests that the sample largely represents young professionals. There is an equal representation of males (56%) to females (44%). In point of work experience, the large portion of (40%) have 1-3 years of existing experience, implying that a large amount of the participants are junior professionals. 68% of respondent work full-time, 20% of repliers do part-time and 12% of repliers do on contractual basis.

Table 4: Factors affecting work-life balance

S. No.	Factors	Description	Impact on work-life balance
1	Working Hours	Long or Irregular working hours reduce personal time	Negative

2	Workload	Excessive workload leads to stress and burnout	Negative
3	Flexible Working Hours	Flexibility helps employees manage personal and professional life	Positive
4	Organizational Support	Supportive management and policies improve balance	Positive
5	Technology	Constant connectivity makes it hard to disconnect from work	Negative
6	Family Responsibilities	Increased family duties can create conflict with work demands	Negative
7	Leave policies	Paid leaves and time off policies help maintain balance	positive

Source: Compiled from various literature sources.

The table shows that things like being able to task in a way and getting support from the organization make it simpler to have a good work-life balance. On the hand having too much work working long hours and feeling pressured by technology make it harder to have a good work-life balance. This is what other studies have found too. When employees get the support they need they can manage their work and life better. Work-life balance is important and getting support, from the organization is a part of it

Table 5: Connection/link between task-life harmony and job satisfaction

S. No.	Level of Work-Life Balance	Employee Condition	Job Satisfaction Level	Productivity
1	High	Less stress, better health	High	High
2	Moderate	Manageable stress	Moderate	Moderate
3	Low	High stress, burnout	Low	Low
4	Poor	Exhaustion, dissatisfaction	Very low	Very low

Source: Developed by the researcher.

The table shows that when employees have a equality in task and life they are happier with their jobs. Task-life equality is really important because it creates individuals sense extra motivated and productive. When people have work-life balance they are happy. When work-life balance is not good people feel stressed and they are unhappy with their jobs well. Task-life equality is the key to being happy with your job. Task-life harmony is very important for people to be happy and do their jobs well.

6. Findings:

The output of the work torched a central link between work–life harmony and job joyfulness. People working who equalise their task and life well tend to be happier, motivated and more productive. They do better in their jobs. Although when work and personal life get out of balance it often leads to stress, dissatisfaction and poor performance. Things like much work and long hours are major factors that hurt employees balance. Employees who deal with these conditions are more likely to burn out which makes them less engaged and committed to their jobs. When companies offer flexible schedules and supportive policies employees can manage their responsibilities better. This results in well-being and larger job joyfulness. The work also shows that company support plays a role in helping people harmonize task and life. A supportive work environment with understanding managers, good leaders and employee-friendly policies helps employee’s mind health and job joyfulness. However with technology making it easy to stay connected to work it can be hard to separate work and personal life. Employees ought to make a balance to stay happy and healthy work-life balance is the central to employee joyfulness. Corporates ought to support employees in achieving this balance.

7. Conclusion

The point of task-life harmony has come as critical determinant of both organizational effectiveness and workers goodness. The study shows that having balance between task and life is very crucial for making employees happy productive and delivering high quality work. When employees manage their task and life well they are extra motivated engaged and perform better. Balanced work life structure also help employees physical and mental health making them more efficient and consistent in their roles.

Persons working with decent task life equality have extra chances to be committed to their organization and stay long term. This reduces employee leaving and costs associated with recruitment and training. On different side not good task life harmony can lead to stress emotional exhaustion burnout and decreased productivity. Such conditions harm performance and overall organizational effectiveness. The study also highlight that organizations play important role in helping employees equalize task and life.

Supportive practices like adjustable time of work mobile work and understanding leaders help employees manage their responsibilities. Work environment with supportive supervisors inclusive policies and employee focused practices promote well being and job satisfaction. In today work environment where technology has blurred line between task and life organizations must implement strategies to prevent work intrusion into personal time.

8. Limitation of the study

Given work has shortcomings that we should think about when we look at its findings. First of all the research is based on secondary data sources like books and articles in existence. This says that how excelent and relevant the study is supported on how good and accurate these sources are. Few of the things we saw at might be old. Not reaaly show what is happening in workplaces now especially when it comes to things like work and life balance and how joyful individuals are with their jobs.

The point that we used data means we cannot get a really good sense of things happening right now. We didn't arranged figures like by doing surveys or interviews which would have let us check what is thought and felt about their our study might not really show what is happening in organizations or industries. Overall while looking at what someone have torched out can give us some good ideas these limitations mean that we need to do more research that includes collecting our own data to make our findings more accurate and relevant to the real world and to different organizations.

9. Future Scope

Many people have looked at how people balance task and life and how good they are with their task. Some gaps are there in what we know about work and life. A lot of the research on work and life uses data, which might not be true anymore especially in places like India that are still growing. We have lower knowledge about how people feel at sized businesses like what they view on their work and life. We also ought to see about how old someone's if they a man or a female and what type of job they do since such things can affect their work and life. Work and life are changing with things like mobile work and using computers. We do not completely check these fluctuations in work and life.

10. Study scope

The view of given work is on understanding how central it is to have a balance between task and life in modern companies. This study also looks at things that affect work and personal life balance like how hours people work how flexible their jobs are, quantum of work they have to do the amount of support they attain from their company what is happening in their personal life and how they handle stress. We desire to check how these things impact how people view about their task and how joyful they are. Some researchers, like (Greenhaus, 2003 & Allen, 2002) pointed that having a balance between task and life is really important for people to be joyful with their tasks and attain a good life. Other researchers, like DeCenzo and Robbins searched out that corporates that help their employees have a balance between task and life has working persons who are happier and work better.
