DIGITAL TRANSFORMATION IN STARTUP AND ENTREPRENEURSHIP

Mehul Jethwa - Research Scholar

Department of MBA, Kalinga University, Raipur, Chhattisgarh

Dr. Nishtha Sharma - Assistant Professor

Faculty of Commerce & Management, Kalinga University, Raipur, Chhattisgarh

ABSTRACT:

Digital transformation helps the business and startup by reducing their operation cost by 18 to 30 percent , improve efficiency and helps in market research & in profitability. The impact of Digital transformation on Startups and entrepreneurs This decade made it clear that digital transformation it's not just an option any more rather a requirement for survival. Many people this that Digital transformation means to hire a developer or buying software but that not the actual meaning of it . It means to rethink about the business option, to engage with customers and can stand where the market keeps changing. It like a guide for entrepreneur, for marketing director and business where they know that they have to change but don't know how to do it. To survive in the current society the people have to keep developing them self and improve their communication and technology progress. Every field has been influenced by digitalization like Teck , Medical Industry , security and many more. Like let's take an example of a sector like IT in the lot decade it observed a new trend and its impact on all layers and technologies in the society like communication, production, management, analysis and many more . Digital technology are changing and transforming the Business models a lot furthermore they have a big impact on old traditional business models . With the help of digital tools in every step of business can perform efficiency in their production and decision making and also reduce the cost of production and unnecessary expect

INTRODUCTION

In light of the current extremely volatile and fiercely competitive global business world, companies have realizing the importance of Digitalization and Digital Transformation of their platform and models as the key for their improvement and competitive advantage. This study helps us to understand how digital transformation helps new business in their performance and customer satisfaction.

It helps us open new ways for business to interact with their customers through social media and email and other online platforms. Where as before the companies used to deliver their goods to the consumer and make money with this transaction.

They are now taking their consumer feed back and improving their product and efficient channels for their customers for their convenience.

In this time of changing and advancing technology it has become crucial element in entrepreneurship. It helps in statistics to improve the culture and customer experience in response to change and shift in the market.

Adapting to the digital transformation is important for entrepreneurs, specially for the startup and small to medium business (SMEs). to survive and improve them self to grow in cutthroat markets. In order to develop their models the owner/entrepreneurs are using technologies like cloud computing, AI , Automation and other efficient tools.

Further more it encourage them to use an innovative culture that helps business owner to access the international markets and helps them in their research and to react quickly of the market change.

The goal of this study is to learn about how the digital transformation can change or impact on startup and entrepreneurs like resource, find out inefficiencies in the strategies and making it easier for business to grow. It aims to understand the relationship between digital adapting and entrepreneurs outcome in the current market.

The objective of this research paper is to help the people to understand about the impact of digital transformation on startup and entrepreneurs. To help the understand about about it. It will specially help the students and other who would like to know about this topic or information regarding this topic. The structure of this research paper include overview of literature, a brief outline, surway data and the results with conclusion.

Digital technology are changing and transforming the Business models a lot furthermore they have a big impact on old traditional business models . With the help of digital tools in every step of business can perform efficiency in their production and decision making and also reduce the cost of production and cut off unnecessary expenses.

1.1 Objective of the study

The particular aim of this study include :

1. To explore the influence of digital transformation of business in startup and entrepreneurs in their decision making.
2. To understand about the importance of Digitalization of business and its how it helps the startups.
3. The impact it leave to the business models and changes them.
4. To see and understand how important digital transformation is in upcoming Ideals and models.
5. To study how digital transformation helps entrepreneurs overcome obstacles. like scare resources and operations efficiency.

1.2 Research Questions:

The research questions that direct this study are presented below:

1 How does digital transformation help startup and entrepreneurs ?

2 If the startup keep digitally developing itself does it have any difference ?

3 In what way does the digital transformation effect the decision making of an entrepreneur ?

4 Does the digital transformation can help the business by analysing future risk and opportunities in market ?

5 Does digitalization in this time is mendetory for improving the company and its growth ?

2. Literature Review

There have been many academic works carried out on digital improvement into business over the years, and this includes the study of theories related to understand about impact digital

transformation in startup, its practices, and its significance. There is strong academic evidence linking strategic decision made using technologies to better organizational performance.

2.1 Conceptual framework of Digital transformation and startup

Digital transformation is characterized by the use of changing digital technology to solve certain kind of problems. In current time it has become a essential for organization world wide specially during the time of COVID 19.

The planning phase have accelerated significantly as business can assess the advance of not having embedded digital technologies. Its helps the business to understand about the industry and the changing focus in shifts. The focus that shifted a lot to digitalization and to the benefit it brings with it .

the digitalization of industries has enabled new production process using the technology trends of industries and its design and principles.

2.2 Adapt to digital tools for higher growth

As we know the digital tools help the startup and entrepreneurs in many ways and improve their performance and their growth. They also help them in understand the market opportunities and risk. It also increases their productivity and understanding of the market. Their are different digital tools that help them in different areas . The ones who keep them self up-to-date gets the benefit of it and also make it easy to operate and get the things done.

By adapting to digital transformation entrepreneurs and startups get an advantage to progress them self further and improve their models and get the benefit of it the tools help by automating the thing greetings information with the help of AI and get help in their analysis as well. With quickly adapting to the changing digital transformation it will keep them in lead compared to their competitor.

2.3 How digital transformation effects business

It effect startup by improving customer satisfaction by engaging with tem and solving their problem, enabling data based decision making and efficiency of the production of the product and the process as well. It helps the new business and startup by affordable digital tools and accelerates growth while the treditional business must adapt to the new technology like AI , lo T, and run automation for completing small task.

This covers different things like operational efficiency it helps them to reduce manual work and also reduces waste which will reduce their cost to a certain point

, customer experience by engaging with the consumer to find out about our product . it helps in new innovations and agility to take / make quick decision.

2.4 How technology adoption promotes Business innovations and sustainability

Technology adoption helps in business innovation and sustainability by helping in the company operations, enabling efficiency of the resources which they have, forecasting new business models. Technologies like AI IoT and Blockchain to reduce the cost and to improve the supply chain. This enhances the advantages of the company compared to their competitors as well as it's lower production cost and helps them to progress forward.

* Reduction of waste.

*To update or make changes in their Model.

*Improve decision making.

*Helps them in achieving their Organisation goal.

2.5 Use digital tools to help the startup and SMEs in their strategies and practice

We advise them to use the tools of digital transformation white making their strategies and doing something it helps them to understand about the decision they should take or what decision will be most beneficial to them and help them by providing growth. It helps them in getting a strategy with they will get more details and which will help in making a profitable decision for the business.

2.5 Evaluate the difficulties entrepreneur encounter while putting digit transformation into practice.

The entrepreneur faces significant challenges while implementing digital transformation from financial difficulty, skill gaps, culture difference/resistance and

security concerns. White it is necessary for improvement and efficiency it requires navigating complex tech , organization shift and strategic hurdles as well.

Other aspects like :-

* Resistance to change.

* Lack of leadership.

* Intense competition.

* Complex operation

2. 6 Research Gap

There aren't much studies that specially examine the relationship between entrepreneur and digital transformation. We know a little about the digital potential and its affects and the use of digital

tools are not that simple and it takes time for them to understand about the tools and how to use them efficiency and correctly. And to see what tools should be used where to understand how to make strategies and business model so that will help the company to grow and reach new heights.

Research Methodology

3.1 Research Design

Research Design is the framework or strategic blueprint of a project / study. The technologies and methods chosen to systematically gather, analyse and measure it to answer the specific questions in the research. It ensures the study is accurate and efficient by guiding the entire process from planning to final conclusion.

Discreptive research design are majorly used in management & about market trends when the aim of the study is to elaborate something.

3.2 Data Collection

The data was collected from various publishers and the data they provided in their reports is was really helpful for students like us to get the data that they have provided in their report. In this report i saw data of different questions which helped me in making this project a success.

3.3 Sampling

A sampling method that can be considered as a form of convenience sampling was used since this type of sampling methodology is most suited to exploratory and descriptive research that aims to gain insights from the survey respondents. It includes about market analysis, salary earners this giving that covers mindset of different groups regarding digital transformation in startup.

3.4 Data Analysis

The data collected was subjected to analysis through frequency distribution and percentage.

Absolute frequencies were recorded with their respective percentage. The use of such techniques makes it possible to easily interpret the responses obtained. It also becomes easier to establish dominant trends as well as differences. The data analysis is done by direct and indirect suray.

3.5 Validity and Reliability

Validity has been guaranteed by questionnaire question in relation to the concepts found in the literature. The surway has examined for clarity and transparent before conducting the survey.

Data Analysis

secondary data analysis

A combination of statistics analysis and models were used in the below pie chart.

the below pie chart shows employee of different areas with different role in their organisation and do take adapt to the changing digital transformation.

90% of the people have adopted digital tools in their business operations. Including the strong trends for degital aspects.

Since adapting to digital tools did the individual notice growth in the perticular segment performance like productivity and other aspects?

75% of the people observed measurable growth in their areas after using or adapting digital tools and now they use this tools in their work to work more efficiently.

In the below pie chart we will see that how much people think they are digital literature or how much they know about digital tools and dits benefit ?

Most person or individual responded as high & moderate and 3.5 % individual responded as their know every tool in their like of work which can help them and other 9% said they have a low knowledge of the tools. Showing confidence in their digital capabilities.

Does your level digital literacy helps in successfully use / implement the digital tool?

76.56% of individual/ people said that their digital literacy helped them in using the tool more efficiently and to adapt to changes more easily than not knowing.

Does using digital platform and tools help them in expanding their customer base ?

87.74% of individual entrepreneurs agree that access to digital platform helped them in expanding their customer base. There are only

3.56% of individual who think that it didn't help them in their line of work.

Does an excellent (effective) change management improve the output/ outcome of digital transformation ?

54.30% strongly agree & 27.38% also agree that effective change management improve digital transformation & the outcome of it.

Noow to I have shown you the pie chart we will discuss about this alittle about it.

* About 70% of the entrepreneur have been using digital tools in their work.

* About 77.3% of the employee saw the measurable growth in their work.

*Around 86% of people agree that their customer base ha been increased because of it.

Now around 90% of the organisation all over the world are currently making changes and are now using digital transformation techniques and tools to improve their efficiency.

Now to summarise the data and its content

• Now a lot of people are using digital transformation in their everyday work place .

• Digital literature plays an important role in running and understanding the digital tools.

• Mostly people believe that they are getting more customer base because of the digital platforms and significantly increase their consumer base.

• The one who choose to use digital tools and its ideas improve their productivity & efficiency very high.

Results and finding

To sum it up , digital transformation is providing a key catalyst for entrepreneurs to grow. Entrepreneurs who willingly uses digital tools are better prepared to scale their business, reach wider customers and streamline operations. However a successful digital adaptation is not easy and can effect the enterpreneur digital literacy.

with the help of acces to modern platforms and a proper approach in management and into his business still the impact of the digital tools also depends on the strategies made by the enterpreneur and continuous support.

Key Finding

* Digital adaptation helps by contributing to measurable business growth as reported by the minority.

*Digital Platform like E commerce, social media helps by bringing new customer and helps in market access more efficiently.

* Digital literacy plays an important role while you are using digital tools and strategies to smoothly adapt and enhance their efficiency.

*Change management strategies to adapt according to the changes in the market as well as for ensuring a successful & sustainable digital transformation progress.

The research explain us that digital transformation is essential to entrepreneurs it not only about technology or adapting to it but doing it strategically, culture , training and adaptability and changes to it according is also important Business which focus on this terms in its journey will have smooth transition and stronger performance outcomes.

The following recommendations are prepared for seeking to learn and use digital transformation in their work to be more efficient.

* Invest in learning Digital literacy to invest their time and money so they and their team can learn can new and innovative ways to do their work and be more efficient in it.

*Find or to adapt scalable Digital platforms use tools like Shopify, Google workplace and zoom to expand and grow communication and e-commerce as well.

* Use project and workflow tools use platform like Notion, clickup can simplify the task and help in management and enhance collaboration.

* Tools to help while implementing structural change management like servicenow and changegear can help in transition process and reduce resistance.

*Data analysis tools like power BI help people and entrepreneurs and make data based decision for improved performance and scaling.

Discussion

The results of the study shows that digital transformation helps the entrepreneur and startups to improve their productivity and efficiency and provide them with tools which will help them in increasing their efficiency and performance in their line of work. Most person ha favorable

attitude toward the ability of it and its benefits , and the percentage of favourable attitude were from 58.9% to 68.7% .

* Digital transformation is viewed by entrepreneurs as a critical, non-negotiable driver of survival, scalability, and competitive advantage in the modern economy.

It represents a simple shifts, incremental technological updates to a understanding of business models, operational processes, and customer engagement strategies.

* We also suggest people or entrepreneurs to keep learning new things an

d ideas about their sector or their line of work with the help of continuous learning they would be able to stay up to date and will able to use the digital tools more efficiently and can change the

structure too.

*Well with it they may have to update or change their structure management and maytake time or can effect the company performance if not done well enough and the business can face issues but if they understand about the digital tools and literature themself that will reduce the risk of of facing issues with making new structure.

* use digital platform to find new customers and individual to expand your business and it also helps you by providing information about the necessary things you will require for it.

*Entrepreneurs should understand about the projects and workflow tools which will help him to produce great results & increase his productivity in a beneficial way.

entrepreneur get a lot help from this tools to improve his productivity and efficiency and they also know that how much digital transformation is important in this time period. So they try to do everything they can to to be the one who will lead his sector or area.

* Im today time every entrepreneurs wants to be the leading one and due to changing technology they have to adapt to developing teck to be one of the profit and successful business there is.

Conclusion

The study in which the digital transformation impact on startup and entrepreneurs ha comprehensive answer highlight the strategies, opportunities and the challenges that will tell us about the current and future of start up innovation and growth in this time of digital era In this i specify the finding and purpose like recommendations and finding a head for future research.

In this they try to use digital transformation as their core for their startup and make strategies according to it to be stable and sustainable growth too. Enabling startup for enhance operational efficiency, product innovation and expand their market and research regarding it. For this all the entrepreneur should have digital literacy and supportive environment have been taken to point asa improvement as a ecocycle conductive to start innovation.

In the current time there are a lot of risk as well as opportunities in the market due to continuous evaluation of the technology and changing consumer behaviour.they help in making a platform based models.

To grab the opportunity for startup the startup should priorities statistical such like continuous learning adaptability and can harness the potential of emerging technologies from innovation and growth.

as startup enbark in digital transformation.it tell them to make strategies that not only. Power of digital technology and it should be assigned and also helps in business objectives and market decision.

The study tells us about a culture of of innovation and agility. Where they experimentation is faced and quick (rapid) is possible through agile practices.

Longitudinal studies on startup success offer anther promising direction for future research. By assessing the long-term effects of digital transformation strategies on startup growth and sustainability, researchers can identify patterns

of success and failure, contributing to a deeper understanding of the factors that influence long-term viability in the digital era. Furthermore, undertaking comparative studies of digital transformation practices among startups in

different geographical and regulatory environments could reveal best practices and contextual factors that significantly influence startup success.
