ABSTRACT:

The Corporate Analyst Development Program (CADP) at J.P. Morgan Chase & Co. provides participants with a valuable opportunity to develop technical, analytical, leadership, and project management skills through practical learning experiences in different business roles. CADP includes both a summer internship program and a full-time two-year rotational program. The full-time program is specially designed for former CADP interns who have completed their undergraduate degree. It consists of three rotations of eight months each, focusing on areas such as analytics, project management, and process improvement. This virtual experience program is designed to help participants understand and practice the responsibilities of a CADP full-time analyst. Through five interactive modules, participants can develop important professional skills and gain hands-on experience using methods and tools that are essential for success in different CADP rotations and various roles at J.P. Morgan Chase & Co. The program helps individuals improve problem-solving abilities, analytical thinking, communication, teamwork, and decision-making skills, preparing them for successful careers in the financial services industry. Start your CADP learning journey today and gain practical exposure to real-world business challenges at J.P. Morgan Chase & Co.

Keywords: *Financial Services, Analytics, Project Management, Process Improvement, Leadership Skills, Technical Skills*

INTRODUCTION

In today's highly competitive and dynamic business environment, it becomes essential for students, researchers and practitioners to understand how a company manages to regulate and maintain its growth. Company analysis is a process through which one gets a deep insight into organizational structure, strategic management practices, performance and market position. In this way it is possible to identify factors leading to success of the firm as well as the problems that can become the reason for the future growth of the company.

This paper is intended to conduct company analysis of the selected firm. It will include background information about the company along with a mission and its key activities. Furthermore, financial performance analysis will be conducted as well as competitive advantages and other factors affecting company operations in the market environment. The aim is to use various analytical methods to get comprehensive insights regarding the functioning and competitiveness of the company.

Company analysis not only includes evaluating the current situation of the company, but it also involves making recommendations for improvement and further development. Therefore, in general, this assignment will contribute to gaining practical experience.

J P MORGAN CHASE & CO

We began when started company in India which acquired Hyderabad and Bengaluru. In the Asian region, we have started to assist in promoting economical growth. This is done through our commity's commitment of being responsible for managing and volunteering in our Foundations' activities and leadership locally.

Murgan and Chase brands. Our company operates in various continents across the globe including the Europe, Middle East and Africa, Asia Pacific and Americas. Our headquarters are located at New York, New York State in the USA.

Our quant analyst teams make use of the abilities of analyzing problems, generating measures, analysis, feedback and objective insights through their analytical skills. These teams apply their analytical skills and knowledge on specific domains to enhance clarity and make decisions.

77% of our borrowers in the dataset have loan to value ratios of 80 or less.

Number of Prospects with Loan to Value Ratios (Out of 507 Possible Prospects in Dataset)

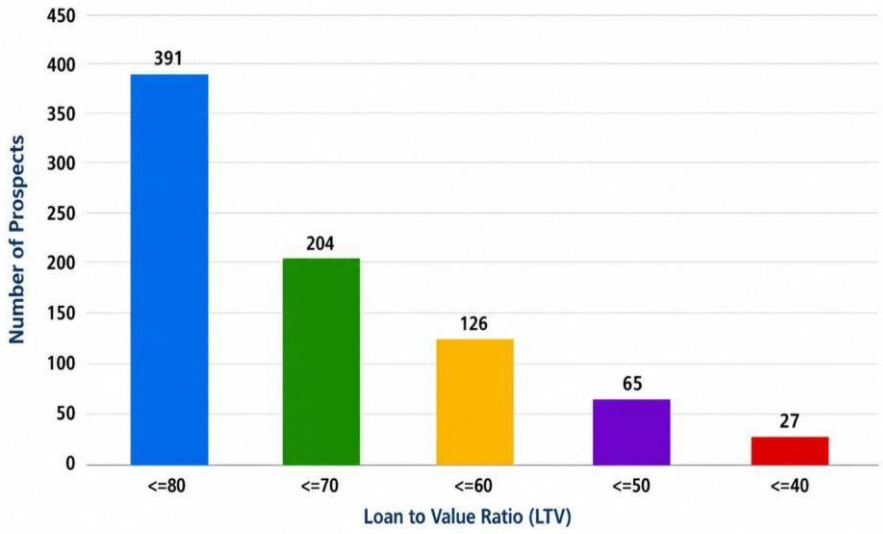

This way, we make sure you feel valued in our organization. Since our clients, transactions, deals and projects are worldwide, you can expect an ease in doing our business and relating to others - this is business and is highly valuable.

As a result of our reach to the globe, you can count on us to take you there. Regardless of whether you are looking for career development or to sharpen your skills, you will be offered the opportunity to relocate to another division or even country.

financial services company in the world. To achieve this, we appreciate.

Combining LTV and annual income criteria generates 59 qualified, high incomesales prospects.

There are 85 borrowers in locations with a minority population greater than 50% in the dataset, representing potential targets for community outreach and support.

% Minority Homeowners in Local Area

Observations and Key Insights

77% of borrowers in the data set have loan to value ratios of 80 or less.

CombiningLTVandannualincomecriteriagenerates59qualified,high in come sales prospects, which is just under 12%.

There are 85 borrowers in locations with a minority population.

Process Mapping

As Is Process Map: Simple Moratgage Origination Process

Opportunities for Process Improvement: Simple Moratgage Origination Process

Process Improvement Opportunities

o Handle underwriting risk differently, using non-traditional sources of data, such as payroll providers, social media presence, property managers, et cetera o Use Al to examine and process documents in telligent automation o Lower the risks of underwriting using Al/machine learning to determine risks o Use a mobile application to manage and organize customer interactions so they can answer questions and follow the process o Automate the prequalification process o Get all documents electronically o Connect IT systems with those of partner title and insurance companies directly o Automate rate contracting and negotiations with predefined options

Review of mortgage documentation through Al algorithms will help speed up the process and lower underwriting risks by identifying risk patterns and flags.

o The current origination process requires getting a lot of paper from many different sources o And the majority of that paper is examined by hand o Meanwhile, the use of Al/ML technology will allow the digitalization and automation of the process of reviewing most of that paper o After the availability of data from the documents has been achieved, Al/ML technology can also identify risks and risk patterns that humans currently cannot see o Consequently, this will greatly lower under writing risk

The technology required for achieving this objective is available and used somewhere. JP Murchan Chase & Co. can become a leader in the field quite easily.

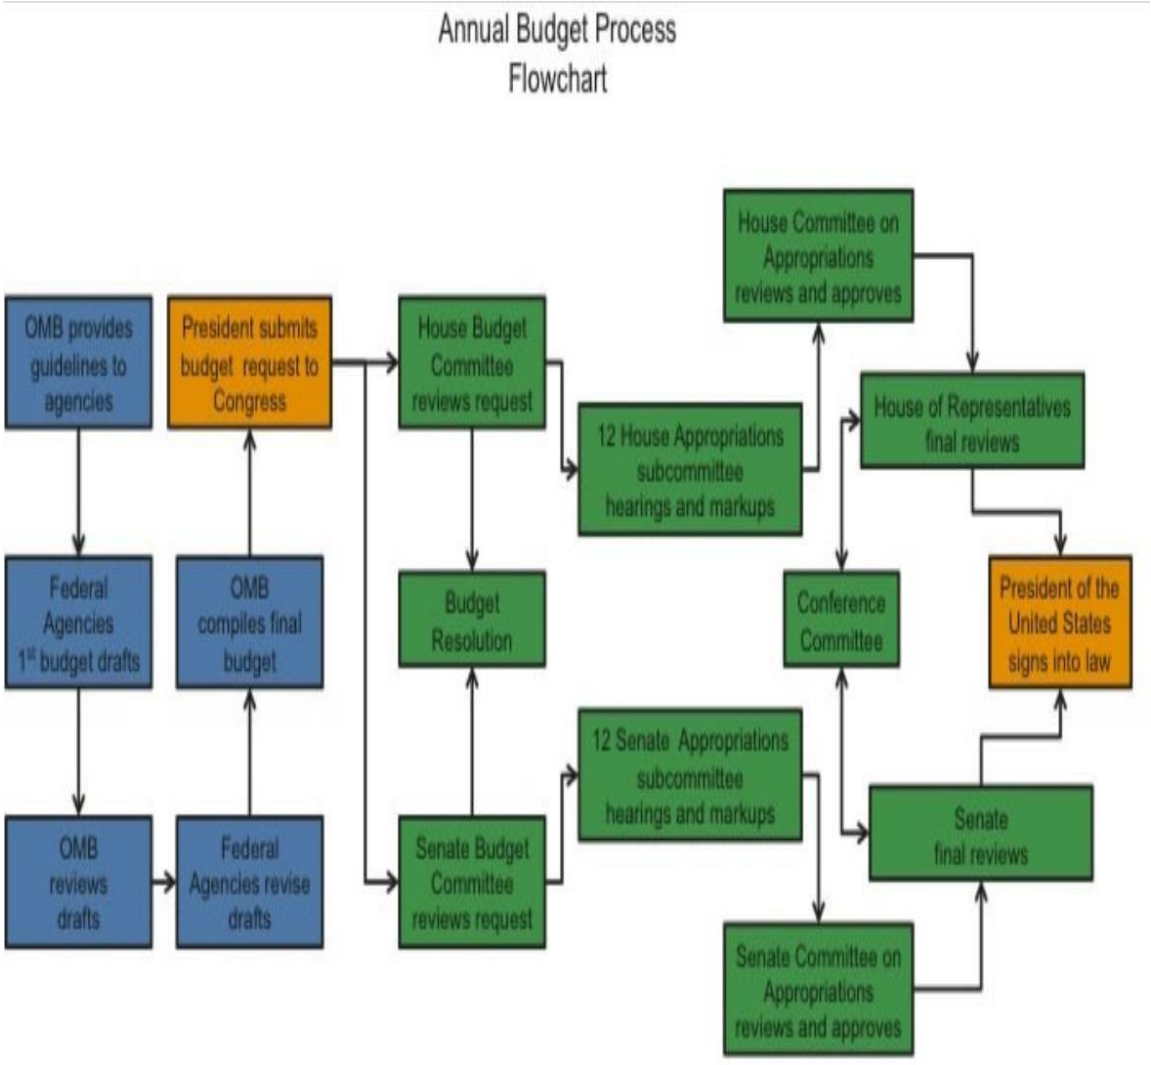

o There are firms implementing Al/ML technologies into their business. o The main risk associated with this is not technological anymore, but rather one of implementation. o The market power and resources of JP Murchan Chase & Co. allow it to become a leader in implementing this technology fast o The advantages of doing so are many, and the disadvantages are even greater

External and internal audits have identical objectives.

This defines the requirements, scheduling, and other criteria of auditing, such as objectives and responsibilities of various team members. Audits often review previous audits to find out what the expectations for representation of information are.

In the course of planning, an internal audit team may plan interviews with management in charge of the audit. It may have its own queue of audit items that the members of the team should attend. And finally, planning concludes with the meeting at which audit reporting begins. Audit reporting involves the preparation of a formal report, possibly including a memo or informal interim report.

The audit plan has a queue to ensure members of the team add to broad expectations. The internal audit team may also pre plan to meet with management from the audit to speak the status and any problem of the audit. The planning stage ends with a meeting that starts the audit reporting contain a formal report

and may include a preliminary or memo style interim vibrant or specific results the auditor thinks the board of directors needs to know right away.

AUDIT

The term audit are mainly refers to a financial statement audit. Moreover, external audits are also important due to regulatory and compliance reasons as well as due to the

shareholder requirements which necessary that external audits need to be done annually, quarterly, and half yearly to be presented in the Annual General Meetings, and meetings of the Board of 16 Directors .In addition, external audits may also be required in case of event where in the regulators who suspect that "something is amiss" in the companies may mandate those companies to be audited by independent and the third party auditors to find the "truepicture" of the finances and operational details of those companies.

THREE WAY MATCHING

Accounts payable (AP), the jobs is managing the attack of supplier charges that arrived each month.

Documents	Purpose	Matching Process		
		2-Way	3-Way	4-Way
Purchase Order	Confirms the purchase was authorized.	✓	✓	✓
Goods Received Note/Order Receipt	Proves the purchase was delivered.	—	✓	✓
Supplier's Invoice	Verifies amount owed and payment terms.	✓	✓	✓
Product Acceptance	Confirms how much of the delivery was accepted.	—	—	✓

This includes identifying that the invoices are real small businesses experience billing scam twice as their larger equevalent, according to an Association of Certified Fraud Examiners (ACFE) report and then the paying same ones . One technique AP teams use to make sure charges are legitimate is called three way matching. In addition to picking up on criminal activities , three way matching can benefit an organization in other ways, especially when the process is automated.Overview of the three matching

processes. Sent by a cybercriminal in Lithuania. (They managed to retrieve their funds). However, small enterprises will not be able to survive such fraud.

Three-way matching refers to the process that allows one to check the information that pertains to a specific purchase among three separate documents. Once it is verified, payment can be released. In case some elements do not match, another AP procedure takes place.

Components of Three Way Matching Procedure

As its name implies, three-way matching entails matching the information contained in three different documents.

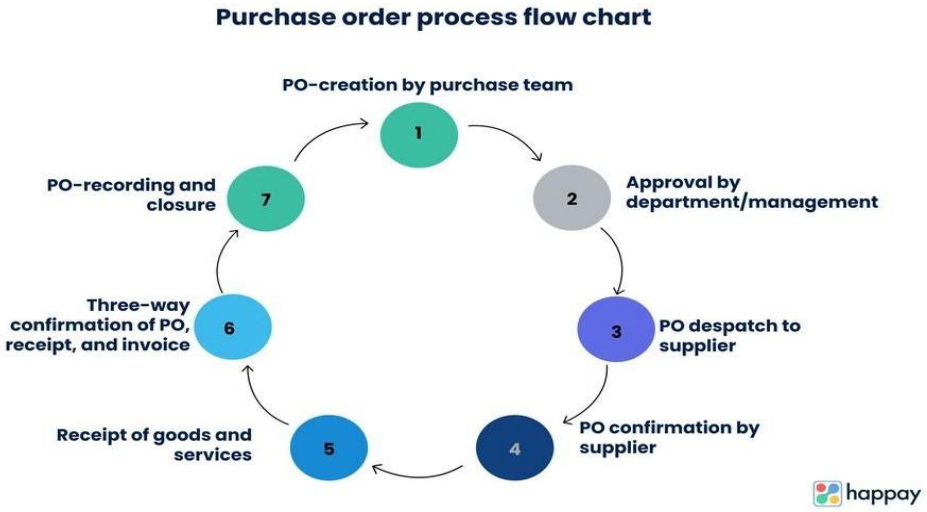

The three documents include:

o Purchase order - an authorized purchase request containing the type, quantity, and price of an order that is agreed between the buyer and supplier. The PO has a unique ID number for tracking purposes.

o Delivery note or receiving report indicating that the goods have been delivered fully or partially.

o Invoice - this is a statement of the amount payable to the supplier by the buyer. The invoice contains payment terms and an ID number.

How is three way matching conducted? Using our previous example of construction company that plans to build twenty houses for a housing development project, we see that the firm issues a PO to the supplier of

clapboards that provides 12,000 sq. ft. of material for $10 sq. ft. The supplier delivers the materials two weeks later and presents his bill.

ACCENTURE

. It helps businesses improve their operations, adopt new technologies, and grow in a competitive market.

Mission:- Accenture solves our clients' hardest problems by giving impressive services in strategy, consulting, digital, technology and operations. Our partner with more than three types of the Fortune Global 500, building innovation to improve the way the world works and lives. From expertise over more than 40 industries and all business parties, we deliver changing outcomes for a demanding new growing world.

Vision:- Our main objective is to curve the culture and define the character of our company. We live the core objective through individual behaviors. They serves a foundation in how we play and make decisions.

Accenture Plc (Accenture) is provider of a large range of services and solutions in strategy, consulting, digital, technology and operations areas.

Its marketing efforts aim to highlight its expertise in digital transformation, technology consulting, and outsourcing services. The company tries to show how it helps businesses adopt modern technologies and improve their performance in a changing business enviroment.

What is Requirements Gathering?

Requirements gathering is an investigative activity which aims to research and document the exact requirements of the project throughout the entire development lifecycle. Effective requirements gathering and requirements management begins right from the beginning of a project.

Requirements gathering is one of the most critical aspects of any project, adding value to a project at various levels. In terms of small budgets, tight timelines, and limited scopes, it becomes very important to have exact documentation of all the requirements in the project.

Requirements gathering may sound easy but is actually a neglected aspect that receives less attention than deserved. Many projects begin with simple requirement lists, only to realize later that a lot of customers'

requirements are not clearly defined. Statistics show that over 70% of failed projects are a result of ineffective requirements gathering.

Why is Requirement Gathering so Important?

After finishing a project, there are a few questions that you must ask yourself.

What were the risks? What resources were lacking? Were there any problems with scope and budgeting? What was the impact of these risks/shortcomings?

By failing to specify some of these requirements such as scope, budget, and deadline, it is very likely that the entire project will be affected.

What is your vision/goal for the project? ⎪ What do you aim to accomplish with the project, which has not been accomplished before? ⎪ What would be the changes in the product that would convince you to recommend the product to others? ⎪ What tools are required for successful completion of the project? ⎪ What are the main concerns regarding the project?

Gathering & Documentation It is advisable to document everything and keep records of every question you are asked and the answers you receive while working on the project. It is best to establish a system that is easily accessible in case anyone else asks you for any information obtained during requirements gathering.

Documentation will play a significant role in analyzing success and failures of the project once it is completed. Moreover, it will help manage stakeholders' expectations and keep everyone accountable.

List of Expectations & Requirements

By creating an extensive list of your objectives, requirements, risks, and potential solutions, you will be able to develop an effective requirements management plan. Some of the questions that you may consider asking include:

Length of the project timeline Who is going to participate in the project? What are the key risks that may arise during the process of gathering requirements? What is the overall goal behind gathering project requirements?

By answering all the above questions, you will be able to map out some of the main requirements of the project and prepare a report to present to the stakeholders.

Monitoring the Process & Feedback As soon as you have received approval from stakeholders, you will be able to implement any changes required during the process of requirements gathering. The next step might be to prepare the wipe if any and lastly, the preparation of a contract if the bid was accepted.

The current state of a process, or the process as is today, is referred to as the AS IS state. AS IS map helps you gather data on the current process, documenting all steps taken, their duration, and other critical information.

This data may be collected manually with the help of pen and paper or by using specialized software.

It helps visualize the current process and how it can be improved in the future. As is map provides information on decisions to be made and the time spent during decision-making.

Effective methods must be put in place for monitoring and tracking requirements across teams so as to minimize any risks.

Moreover, you must consider feedback from other stakeholders and other teams as this data will help indicate progress of the project. You will be able to monitor the process more closely with the help of feedback.

What Is a To Be Process Map A to be process map is used to depict the way processes could be improved.

Why would I want to use a to be process map since I already have a clear idea of how things should be done? The reason is that it is possible that you have not considered certain aspects of the process and there could be areas that need to be improved.

How to Create a To Be Process Map

Steps to create a to be process map include:

Understanding the current process Deciding on which improvements need to be designed into the process Testing the new process on a small group/departments of people involved in the execution of the process to

obtain feedback on whether the process works effectively Implementation of new processes across departments that need the information for performing the process

INSTITUTE OF CHARTERED ACCOUNTANTS AUSTRALIA AND NEW ZEALAND

In November 2013 Members of the Institute of Chartered Accontants voted in favor of a proposal to establish One New Institute: "Chartered Accountants Australia and New Zealand". This institute will consist of a union of New Zealand Institute of Chartered Accountants and the Institute of Chartered Accountants in Australia (ICAA).

Institute of Chartered Accountants in Australia (ICAA) was established in 1928 in Sydney as a professional association for accountants in Australia. However, its history dates back to the year 1886 when ACPA was established in Melbourne.

In 1903, ACPA evolved into Australasian Association of Accontants (AIA). AIA was renamed Australian Society of Accountants in 1923 and later merged with ICAA to form the Chartered Accountants of Australia in 1928.

Profit and Loss (P&L) Statement

Profit and Loss (P&L) statement is a financial statement that aims to optimize revenues, costs, and expenses incurred in a given accounting period. P&L statement is one of the three financial statements issued by every publicly listed firm twice per year and annually. When used along with balance sheet and cash flow statements, a P&L statement helps analyze the financial performance of the firm. Statements can be prepared under two methods: Cash and Accrual method of accounting. Comparing P&L statements over different accounting periods is essential as it helps understand changes that occur over time better than the figures.

o P&L statements are also a o Statement of profit and loss o Statement of operations o Statement of economic results or income o Earnings statement o Expense statement o Income statement

Break Even Point.

In the financial, business and cost accounting context, the break even point is the point where both the total cost and total revenue is at parity and there is "break-even". One has neither made a gain nor a loss. Costs have also been covered and capital has been rewarded with the risk adjusted, expected return.

As far as reporting is concerned, the break-even point is obtained by dividing the fixed cost of production with the product price minus the variable cost of production. The break-even point is the level of production where the cost of production matches with the revenues for the product. In dealings, the point is achieved when the market price of an product is equal to its cost of production.

• A break-even analysis provides assistance with respect to identifying missing expenses, limiting decision making influenced by emotions, setting goals, obtaining financial backing and determining right prices.

Benefit of a Break even Analyses

A break even analysis can be used in different ways. For instance, it can assist us with:

• Finding missing expenses. The break even analysis can identify expenses that would otherwise come up unexpectedly. At the end of this analysis, all our economic commitments would be known to us. Thus, there would not be any surprises further down the road.

• Limiting decision based on emotions. When it comes to creating business decisions, emotions should seldom be allowed to play any role. However, that is easier said than done. With the aid of a break even analyses, we will be left with cold hard facts, which make it easy for us to take better decisions.

• Setting goals. We would get to know what parts of our goals have to be fulfilled for us to generate profit. Thus, we could set goals and start working toward achieving them.

• Securing funding. In case of getting financial backing, we will have to resort to the break even analyses method.

• Pricing appropriately. A break even analyses method will tell us how exactly to price our products.

Business Model Canvas

The Business Model Canvas is the strategic management tool that enables business owners to visualize and develop their business models. It is a one page template that comprises of nine building blocks. These include: Customer Segments: Who are your target customers? What are their needs and preferences?

Value Proposition: What products or services do you offer to meet the requirements of your target customers? What distinguishes your offerings?

Channels: How do you plan to access your customers and deliver the goods and services to them? Which marketing channels will you utilize?

Customer Relationships: What will be the nature of relationship between you and the customers? What kind of customer service and support will you render?

Revenue Streams: How will you make money from your products or services? Which pricing strategies will you adopt?

Key Activities: What will be the key activities needed to be undertaken for creation of values for your customers?

Cost Structure: What will be the cost structure of your firm?
