ANALYZING RELATIONSHIP BETWEEN HR POLICIES AND WORK CULTURE IN ORGANIZATION

Ankita Kumari Shah - MBA 4th Semester | ankitashahgupta28@gmail.com

Dr. Nishtha Sharma - Assistant Professor | nishtha.sharma@kalingainiversity.ac.in

Department of Management, Kalinga University, Naya Raiur (CG)

ABSTRACT:

Purpose: The motto of this research is to analyse the relationship between Human Resource (HR) policies and work culture within organizations. It aims to evaluate how structured HR practices such as recruitment/selection, training and development, performance analysis, compensation systems, and employee relations contribute to shaping employee attitudes, organizational values, and overall workplace environment.

Research Design: The research follows a descriptive and analytical research design. First hand data are collected through structured questionnaires administered to employees across various functional departments and hierarchical levels. The responses collected was analysed using statistical techniques, including co-relation analysis, to assess the relationship between HR policies and key dimensions of work culture such as teamwork, communication, trust, motivation, and job satisfaction.

Practical Implications: The findings suggest that well-defined, transparent, and strategically aligned HR policies plays a crucial role in developing a healthy work culture. Organizations that integrate HR strategies with their cultural objectives are more likely to implement higher employee engagement and improved productivity.

Social Implications: Effective HR policies promote fairness, inclusivity, and employee well-being, thereby contributing to a healthier work environment. A strong work culture supports ethical practices and fosters mutual respect, which benefits employees and society at large.

Future Direction/ Scope: Further studies may explore industry-specific comparisons, cross-cultural analyses, or longitudinal approaches to better understand the long-term impact of HR policies on organizational culture.

Keywords: HR Policies, Work Culture, Organizational Development, Performance Management, Organizational Effectiveness.

Introduction

In today's intense business climate, organizations are not only judged by their financial achievement but also by the quality of their work culture. Work culture reflects the shared ethical standard, convictions, mindset and conduct that influence how employees interact and perform within an organization. A positive work culture encourages teamwork, innovation, trust, and employee satisfaction, while a negative culture can lead to low morale, high turnover, and reduced productivity.

Human Resource (HR) policies play a central role in shaping this culture. They are more than formal guidelines; they directly influence how employees are recruited, trained, evaluated, rewarded, and supported. When HR practices are fair, transparent, and are in sync with organizational goals, they create a sense of belonging and motivation among employees. Whereas poorly designed or inconsistently implemented policies may result in dissatisfaction and conflict within the workplace.

Understanding the relationship between HR policies and work culture is necessary for managers and organizational leaders. By aligning HR strategies with cultural objectives, organizations can build a supportive and high-performing work environment. This study focuses on analysing how different HR policies contribute to create a positive work culture and how this relationship affects overall organizational effectiveness.

Literature Review

1. Introduction to HR Policy and Work Culture. Human resource management plays a crucial role in developing and maintaining a healthy work culture in the organization. A study by Bambang Ermansyah Saragih et al. (2025) explained that HR management practices such as clear policies, employee support, training, and fair treatment help in creating a productive work environment. The research highlighted that when management concentrate on employee development and follows proper HR rules, employees feel respected and motivated to contribute to organizational goals. Positive HR practices also encourage teamwork, discipline, and good relationships among employees. The study concluded that effective HR management is a vital factor in building a strong organizational culture and improving overall work performance (Saragih et al., 2025).

2. Function of HR Policies in Employee Behaviour. The function of human resource management policies is important in influencing employee motivation, commitment, and overall performance in an organization. A study by G. Pradhan et al. (2024) found that well-structured HR policies and practices help in Cultivating a collaborative environment where employees feel heard and respected and motivated to perform better. The study explains that policies related to rewards, training, communication, and performance evaluation drive employee retention and engagement toward the organization. When the employees feel pleased with HR practices, they embrace their work with a positive mindset, which fosters a healthy and cooperative work culture. The findings suggest that effective HR policies improve

performance and, in turn, also strengthen organizational culture and employee relationships (Pradhan et al., 2024).

3. Impact of Recruitment and Selection Policies on Work Culture. Recruitment and hiring policies are considered one of the key HR practices that influence organizational culture. A study by Tatiana G. Zhamkova et al. (2021) explained that the employee hiring process has a major impact on shaping the standards and behaviour within an organization. The authors stated that selecting employees whose attitudes and skills match the organization's goals helps in developing a strong and positive work culture. The study also highlighted that a fair and systematic recruitment process increases trust among employees and supports teamwork and cooperation. When organizations follow clear hiring policies, they are more likely to foster a stable and productive work environment. Therefore, recruitment policy is directly connected with the evolution of organizational culture (Zhamkova et al., 2021).

4. Training and Development as a Cultural Tool. Training and development policies are important HR practices that help in strengthening company ethos. A study by Oleksandr Balan et al. (2025) examined how structured training programs can be used to improve corporate culture, especially in public sector organizations. The authors explained that when employees undergo appropriate training and prospects for developing competencies, they better understand organizational values, rules, and expected behaviour. This process helps in creating discipline, cooperation, and a sense of responsibility among employees. The study also suggested that continuous learning programs encourage positive attitudes and improve communication within the workplace. Hence, effective training and development policies contribute to the cultivation of a strong and supportive work culture (Balan et al., 2025).

5. Performance Management Policies and Workplace Environment. A study by Andrius Janiukštis et al. (2024) found that a positive organizational environment helps employees feel comfortable, respected, and emotionally secure at work. The research showed that supportive management practices, clear rules, and fair policies encourage healthy communication and cooperation among employees. When the organizational climate is positive, employees experience less stress and develop stronger professional relationships. The study also suggested that HR policies related to employee support, communication, and work conditions play a vital role in creating a healthy work culture. Therefore, the organizational climate influenced by HR practices directly affects employee satisfaction and overall workplace culture (Janiukštis et al., 2024).

6. Compensation and Reward Policies and Employee Motivation. A study by Sejal L et al. (2024) examined how salary structure, incentives, and reward systems affect the motivational level of employees

in an organization. The study found that fair and transparent compensation policies make employees feel valued and pleased with their jobs. When employees are convinced that their efforts are properly recognized, they show higher commitment and foster positive perceptions of the organization. The research also highlighted that effective reward systems encourage cooperation, improve morale, and help in creating a supportive work environment. Therefore, compensation and reward policies help build a positive work culture and improving overall organizational performance (Sejal L et al., 2024).

7. HR Policies and Communication Culture. A study by H. Zakharchyn (2024) explained that effective communication policies facilitate employees' understanding of organizational goals, rules, and expectations. The research highlighted that when management maintains open and transparent communication with employees, it builds trust and reduces misunderstandings at the workplace. Proper communication practices also encourage teamwork, participation, and mutual respect among employees. The study suggested that strong communication systems, supported by HR policies, contribute to a healthy organizational climate and improve employee relationships. Therefore, communication as a part of HR management directly influences the development of a supportive and cooperative work culture (Zakharchyn, 2024).

8. Work-Life Balance Policies and Organizational Climate. Work-life balance policies represent an important aspect of human resource management that contributes to employee well-being and workplace satisfaction, which is vital elements of organizational work culture. The research by A.T.D.(2025) found that organizations that adopt flexible working models, leave benefits, and supportive workplace policies help employees maintain work-life balance. This study showed that when employees feel pleased with their work conditions, they undergo lower levels of stress and show more positive behaviour in the office environment. Such policies also improve employee commitment, cooperation, and overall morale. The study concluded that effective work-life balance policies create a healthy organizational environment and foster a positive and supportive workplace culture (A.T.D.2025).

9. Relationship between HR Policy Consistency and Cultural Stability. Strategic personnel management practices have a notable effect on organizational culture and the overall stability of an organization. A study by Iulian Georgescu et al. (2024) explained that effective HR policies help organizations become more adaptable and resilient in changing work environments. The research showed that practices such as proper planning, employee development, performance management, and supportive leadership create a culture of trust and cooperation among employees. When HR strategies are in line with organizational goals, employees feel more secure and motivated, which strengthens teamwork and commitment. The study concluded that strong HR management practices not only boost performance but

also help in developing a positive and stable work culture that supports long-term organizational success (Georgescu et al., 2024).

10. Overall Correlation between HR Policy and Work Culture. Several studies demonstrate a strong link between human resource policies and the development of workplace culture. Researchers such as Herman Aguinis et al. (2022), Iulian Georgescu et al. (2024), and Andra-Nicoleta Ploscaru et al. (2023) explained that HR policies related to recruitment, training, communication, rewards, and employee support directly influence employee behaviour and workplace environment. When organizations follow clear and fair HR practices, employees feel secure, motivated, and more dedicated to their work, which contributes to fostering a positive and collaborative work culture. Whereas, weak or unclear HR policies may create dissatisfaction, conflicts, and poor relationships among employees. Literature also shows that positive HR initiatives boost employee well-being, satisfaction at work, and collaboration, all of which are critical factors of a healthy organizational culture. Therefore, It can be inferred that effective HR policies and a positive work culture are closely connected and together contribute to better organizational performance and long-term success.

11. Research Gap. From the review of existing literature, it is evident that many researchers have studied different aspects of HRM frameworks and organizational work culture. Several studies have concentrated on specific HR practices such as recruitment, training, compensation, communication, employee engagement, and work-life balance, and their influence on employee performance, motivation, and well-being. Other researchers have analyzed organizational culture and climate as separate factors affecting employee satisfaction and workplace relationships. However, there is limited empirical research on the overall correlation between HR policies and work culture in a single framework. In many cases, the connection between HR policy implementation and the actual development of work culture in Organizations have not been examined in depth, especially in practical organizational settings.

Furthermore, most research has looked at HR practices separately instead of understanding how different HR policies together shape the overall work culture of an organization. There is also a requirement for more research that explains how employees perceive HR policies and the way they influence work environment behaviour and organizational environment. Therefore, the present research intends to fill this gap by understanding the link between HR policies and work culture in an integrated manner, with the aim of better understand how effective HR practices aid in the growth of a positive organizational culture.

Research Methodology

1. Research Design

This research uses a descriptive and correlational research design. The descriptive design helps to interpret the existing HR policies and the current work culture in the company. It allows the researcher to describe employee opinions, workplace environment, and organizational practices in a clear manner.

The correlational design is used to determine whether there is a link between HR policies and work culture, and to what extent HR practices influence the working environment. The study does not make any adjustments to or controlling any variable but only observes and analyses the link between them. Therefore, the correlational design is appropriate for this research. The design helps in identifying whether better HR policies lead to a more positive work culture in the entity.

The study is quantitative in nature because data will be gathered from employees through a structured questionnaire and analysed using statistical techniques. The study focuses on employees' perceptions about HR policies such as recruitment, training, rewards, communication, and work-life balance, and how these policies shape their behaviour, satisfaction, and relationships at work.

2. Research Model

The present research is based upon a descriptive and correlational analysis design to examine the relationship between Human Resource (HR) policies and work culture in the organization. In this research, HR policies are regarded as the independent variable, while work culture is serving as the dependent variable. The model assumes that effective HR policies help in developing a positive work culture, improving employee behaviour, satisfaction, and workplace relationships.

Variables in the Research Model:

Independent Variable (IV): HR Policies

HR policies include different practices followed by the organization to manage employees.

- Recruitment and Selection Policy
- Training and Development Policy
- Compensation and Reward Policy
- Performance Appraisal Policy
- Communication Policy
- Work-Life Balance Policy

- Employee Welfare Policy

Dependent Variable (DV): Work Culture

Work culture refers to the working environment and behaviour of employees in the organization.

- Employee behaviour
- Job satisfaction
- Teamwork and cooperation
- Employee commitment
- Workplace relationships
- Organizational environment
- Employee motivation

Conceptual Model Diagram

3. Research Objectives

- To examine the existing work culture in the organisation. This objective focuses on analyzing the working environment, employee behaviour, teamwork, job satisfaction, and relationships among employees in the organization.
- To analyse the link between HR policies and work culture. The main aim of the research is to find whether HR policies have a immediate influence on shaping organizational culture.

- III. To evaluate how HR policies contribute to creating a constructive workplace environment. The research also aims to examine whether fair and supportive HR policies help in developing cooperation, trust and satisfaction among employees.

4. Research Population

The population under study represents the total number of individuals from whom the data can be collected for the research. In the present study, the population includes all employees working in the ILS Hospitals, Raipur, a unit of GPT Healthcare Limited, where the study is being conducted. Since the research concentrates on the relationship between HR policies and work culture, employees are considered the most appropriate population because they directly experience HR practices and the working environment.

The population consists of employees from different departments and different levels of the organization, such as managerial staff, administrative staff, and operational employees, nursing staff. Including employees from different positions helps in getting a better insight into how HR policies affect the work culture across the organization.

5. Data Collection

Information was compiled from primary as well as secondary sources for this study. Primary data is collected directly from organizational employees. The study used a structured questionnaire designed via Google Forms to collect data. The questionnaire includes questions designed related to HR policies such as recruitment, training, compensation, communication, performance appraisal, and work-life balance, along with questions related to work culture like job satisfaction, teamwork, motivation, and workplace relationships.

Secondary information is collected from different sources to support the research study. These sources include Research journals, Articles and previous research papers, Websites and online publications related to HR policies and work culture knowledge. Secondary data helps in preparing the literature review and understanding the conceptual framework of the study.

6. Sampling

Sampling method describes the process of selecting a small group of people from the total population for the objective of the study. Since it is not feasible to obtain data from all employees in the organization., a sample is selected to represent the population. The convenience sampling technique is used in this research. In this method, employees who are easily available and agreeing to take part in the study are selected as respondents. Employees from different departments and different levels of the organization are included in the sample so that the responses represent the overall work culture of the organization. The number of respondents in the study consists of 62 employees working in the selected organization.

7. Data Analysis Tools

In this study, appropriate statistical methods are used for data analysis to realize the link between HR policies and work culture in the organization. The obtained data is first organized and coded, and after which subsequent analysis was carried out using IBM SPSS Statistics software for accurate and systematic results.

- Descriptive statistics are used to summarize the basic characteristics of the respondents, covering aspects such as age and gender, education, and work experience. These statistics help in understanding the overall structure of the sample.
- To verify the reliability of the questionnaire, reliability analysis is conducted using Cronbach's Alpha. This helps in checking whether the set of survey questions used for data collection are consistent and dependable.
- Furthermore, Pearson correlation analysis is applied to test the link between HR policies and work culture. This method aids in determining whether there is positive or negative relationship exists between the variables.
- In addition, hypothesis testing is performed using statistical methods such as the t-test to determine whether the observed relationship is statistically significant. These tools together help in drawing meaningful conclusions and offer a clear insight of how HR policies influence work culture in the establishment.

8. Data Analysis and Interpretation

Data analysis and interpretation is the sequence of arranging, examining, and explaining the information collected from the respondents in order to explore the relationship between HR policies and work culture in the organization. Data for this study were obtained using a questionnaire is carefully classified, tabulated, and analysed using simple statistical tools. The responses given by employees are converted into tables,

percentages, and charts so that the information can be easily understood. Correlation analysis is also used to understand the link between the independent variable, which is HR policies, and the dependent variable, which is work culture.

Interpretation of data is done by explaining the results obtained from tables and charts. Each result is analysed to understand employee opinions about recruitment, training, compensation, communication, performance appraisal, and work-life balance policies, and how these policies influence the overall work culture in the organization.

9. Limitations of the Study

- i. Limited sample size The study is conducted on a limited number of employees therefore the findings may not represent the views of all employees in the organization.
- ii. Limited to one organization / selected organizations The research is restricted to a particular organization (or selected organizations), so the outcomes may not be applicable to all types of organizations.
- iii. Dependence on employee responses This research is grounded on the responses given by employees through questionnaire. The accuracy of the results depends on how honestly and carefully the respondents answered the questions.

Data Analysis

The study analysed the obtained data using IBM SPSS statistics software to ensure accurate and systematic results. Descriptive statistics were applied to summarize the data and identify overall patterns and trends among the respondents. To check the consistency of the questionnaire, A Cronbach's Alpha of 0.853 was derived from the reliability analysis, indicating strong internal consistency. Furthermore, Pearson's correlation method was applied to determine the relationship between HR policies and work culture. Hypothesis testing was also performed to better understand the relevance of these relationships and to gain deeper insights into the interconnections among different organizational factors.

Findings and Results

1. Demographic sample

Descriptive statistics were applied to assess the demographic profile of respondents and understand the sample structure. A total of 62 valid responses were collected and used for the study, providing a reliable basis for further analysis.

Table1: Overall Statistics Table

Statistics						
		1) Age Group	2) Gender	3) Educational Qualification	4) Years of Experience	5) Occupation
N	Valid	62	62	62	62	62
	Missing	0	0	0	0	0

All 62 responses are valid and complete, which increases the reliability and accuracy of the analysis. Since there are no missing values, the dataset is well-structured and suitable for further statistical analysis.

Table 2: Respondent's Age Distribution

Age Group					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	21-25	30	48.4	48.4	48.4
	26-30	11	17.7	17.7	66.1
	31-35	11	17.7	17.7	83.9
	Above 40	9	14.5	14.5	98.4
	Below 20	1	1.6	1.6	100.0
	Total	62	100.0	100.0	

The majority of respondents are within the specified age group of 21–25 years, accounting for 48.4% of the total sample. This is followed by the age groups of 26–30 years and 31–35 years, each representing 17.7% of the respondents. Participants above 40 years make up 14.5%, while those below 20 years account for only 1.6%. This distribution suggests that the research is largely dominated by early-career individuals.

Table 3: Respondent's Gender Distribution

Gender					
		Frequency	Percent	Valid Percentage	Cumulative Percentage
Valid	Female	37	59.7	59.7	59.7
	Male	25	40.3	40.3	100.0
	Total	62	100.0	100.0	

Considering the gender distribution, 59.7% of the study participants were female, while 40.3% were male. This implies that a larger proportion of the study participants were women.

Table 4: Respondent's Educational Qualification.

Educational Qualification					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Graduate	21	33.9	33.9	33.9
	PhD	1	1.6	1.6	35.5
	Post Graduate	31	50.0	50.0	85.5
	Professional Degree	3	4.8	4.8	90.3
	Undergraduate	6	9.7	9.7	100.0
	Total	62	100.0	100.0	

The largest proportion of respondents are Postgraduates, accounting for 50% of the total sample, followed by Graduates at 33.9%. A smaller proportion includes Undergraduates (9.7%), those with Professional Degrees (4.8%), and PhD holders (1.6%).

The pattern of distribution reveals that most participants are well-educated, with a significant number having higher academic qualifications. Therefore, their responses are expected to be informed and thoughtful, which enhances the overall credibility of the study.

Table 5: Respondent's Work Experience.

Years of Experience					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	1-3 years	10	16.1	16.1	16.1
	3 -5 years	3	4.8	4.8	21.0
	5 -10 years	15	24.2	24.2	45.2
	Under one year	28	45.2	45.2	90.3
	Above 5 years	6	9.7	9.7	100.0
	Total	62	100.0	100.0	

The data shows that 45.2% of the respondents have under one year of work experience, making it the largest group. This is followed by 24.2% with 5–10 years of experience, 16.1% with 1–3 years, 9.7% with more than 5 years, and 4.8% with 3–5 years of experience. This distribution demonstrates that a majority of the participants are relatively new to their organizations, reflecting the perspectives of early-stage employees.

2. Reliability Analysis

Reliability analysis is used to check the consistency and dependability of the survey questionnaire utilised in the study. In this research, IBM SPSS software is applied to measure reliability through Cronbach's Alpha. This method helps in determining whether the set of questions used to measure HR policies and work culture are consistent and produce reliable results. A higher value of Cronbach's Alpha indicates better consistency of the data.

Table 6: Reliability Statistics (Cronbach's Alpha)

Reliability Statistics	
Cronbach's Alpha	N of Items
.853	12

The Cronbach's Alpha value found in this study is 0.853, which reflects a high level of reliability. Generally, Values exceeding 0.7 are considered satisfactory, while values above 0.8 reflect good extent of internal consistency within the items in the questionnaire.

This result shows that the questions used to measure HR policies and work culture are closely related and consistent with each other. It suggests that the participant's responses are sufficiently reliable for use in further analysis. such as correlation and hypothesis testing.

3. Correlation Analysis

Pearson correlation analysis is conducted to assess the relationship between HR policies and work culture in the organization. The results indicate a positive correlation, suggesting that as the efficacy of HR policies increases, the standard of work culture also improves.

Table 7: Correlation Matrix

Correlations											
		How clearly are the HR policies communicated during the onboarding process?	To what extent do you feel HR policies are applied consistently across all departments?	Does the current Leave Policy support a healthy work-life balance?	How effective is the Grievance Redressal policy in resolving workplace conflicts?	How would you rate the transparency of the current Promotion and Appraisal policy?	How would you describe the level of trust between employees and management?	How would you rate the psychological safety (feeling safe to speak up) in your team?	How does the organization react to mistakes made by employees?	How often do you feel pressured to work beyond official office hours?	To what degree is teamwork encouraged over individual competition?

***. Correlation at 0.001(2-tailed)											
*. Correlation is significant at the 0.05 level (2-tailed).											
**. Correlation is significant at the 0.01 level (2-tailed).											

The Pearson correlation analysis shows a strong positive association between HR policies and work culture variables. Clear communication of HR policies during onboarding showed strong correlations with policy consistency ($r = 0.625$, $p < 0.001$), transparency ($r = 0.454$, $p < 0.001$), and collaborative trust between colleagues and management ($r = 0.443$, $p < 0.001$). Similarly, effective grievance redressal policies demonstrated strong associations with psychological safety ($r = 0.574$, $p < 0.001$) and transparency in promotion and appraisal ($r = 0.569$, $p < 0.001$). Overall, the result revealed that well-structured and

consistently implemented HR policies significantly facilitate the growth of a positive and supportive organizational work culture.

The correlation analysis reveals a positive and meaningful relationship between HR policies and work culture within the organization. The results indicate that when HR policies are clearly communicated, consistently applied, and fairly implemented, employees tend to experience a more supportive and transparent work environment. For instance, transparency in promotion and appraisal policies exhibited moderate positive relationships with several work culture factors, suggesting that employees feel more assured and trusting when decisions are perceived as fair and open. Similarly, grievance redressal mechanisms and consistent policy implementation were positively associated with teamwork, trust, and psychological safety, indicating that employees are more inclined to collaborate and express their concerns when they feel supported by the organization. The findings suggest that clear communication and consistent implementation of HR policies serve a vital role in shaping a positive organizational work culture. In particular, grievance redressal mechanisms and transparent promotion policies were strongly associated with employees' sense of psychological safety and trust. Additionally, teamwork encouragement and supportive responses to employee mistakes were positively linked with effective HR practices.

Overall, the results confirm that well-designed and effectively implemented HR policies contribute significantly to fostering a healthy, supportive, and collaborative work culture within organizations. Therefore, organizations should focus on strengthening HR policy frameworks to enhance employee satisfaction, trust, and workplace harmony.

4. Hypothesis Testing

For testing the association between HR policies and work culture, the following hypotheses can be framed:

Null Hypothesis (H_0): There is no substantial link between HR policies and work culture in the organization.

Alternative Hypothesis (H_1): There is a meaningful positive association between HR policies and work culture in the organization.

In this research, the t-test statistical method has been employed for hypothesis testing to examine whether there is a significant association between HR policies and work culture in an organization

Table 8: T-Test Table

One-Sample Test							
Test Value = 4							
	t	df	Significance		Mean Difference	95% Confidence Interval of the Difference	
			One-Sided p	Two-Sided p		Lower	Upper
How clearly are the HR policies communicated during the onboarding process?	-7.128	61	<.001	<.001	-.581	-.74	-.42
To what extent do you feel HR policies are applied consistently across all departments?	-12.135	61	<.001	<.001	-.887	-1.03	-.74
Does the current Leave Policy support a healthy work-life balance?	-16.161	61	<.001	<.001	-1.097	-1.23	-.96
How effective is the Grievance Redressal policy in resolving workplace conflicts?	-11.400	61	<.001	<.001	-.919	-1.08	-.76
How would you rate the transparency of the current Promotion and Appraisal policy?	-10.108	61	<.001	<.001	-.823	-.99	-.66
How would you describe the level of trust between employees and management?	-11.891	61	<.001	<.001	-.758	-.89	-.63
How would you rate the psychological safety (feeling safe to speak up) in your team?	-9.329	61	<.001	<.001	-.871	-1.06	-.68
How does the organization react to mistakes made by employees?	-5.737	61	<.001	<.001	-.597	-.80	-.39
How often do you feel pressured to work beyond official office hours?	-11.233	61	<.001	<.001	-1.032	-1.22	-.85
To what degree is teamwork encouraged over individual competition?	-7.937	61	<.001	<.001	-.677	-.85	-.51

The hypothesis testing was carried out using the t-test method to examine whether there is a significant association between HR policies and work culture in the organization. The results derived from the analysis, the significance value (p-value) is found to be less than the standard level of 0.05.

In addition, the t-values obtained for all variables are relatively high in magnitude (negative values such as -7.128, -12.135, -16.161, etc.). These high t-values suggests that there is a strong divergence between the observed responses and the test value, suggesting that the outcomes are not due to chance.

This suggests that the null hypothesis (which defines that there is no substantial relationship between HR policies and work culture) is rejected, and the substitute hypothesis is accepted. This reveals that HR policies have a meaningful and statistically significant impact on the work culture of the organization.

The findings reveal that factors such as clear communication of policies, consistency in implementation, and transparency in HR practices contribute positively to employee behaviour, trust, and overall workplace

environment. Hence, it can be derived that effective HR policies play a crucial role in shaping a nurturing and supportive workplace culture.

Conclusion & Future Scope

Conclusion

The present research aimed to analyse the association between HR policies and work culture in an organization. As per the data collected and analysed, it can be inferred that HR policies play a crucial role in shaping the work culture of an organization. The findings of the research suggests that factors such as clear communication of policies, consistency in implementation, transparency in appraisal systems, and supportive work-life balance practices have a strong influence on employee behaviour and workplace environment.

The statistical analysis, including reliability testing, correlation, and hypothesis testing, confirms that there is a statistically significant positive relationship between HR policies and work culture. When employees interpret HR policies as fair, transparent, and well-implemented, they develop elevated levels of trust, motivation, and job satisfaction. This contributes a more positive, cooperative and result oriented work culture.

Overall, the research points out that organizations should focus on developing strong and employee-friendly HR policies, as they are vital factor in building a healthy and sustainable work culture. A well-managed HR system not only elevates employee satisfaction but also supports the long-term success of the organization.

Future Scope

The present research sheds light on the relationship between HR policies and work culture. However, there are various avenues for future research to expand and deepen the understanding of this topic.

Future studies can be conducted with an expanded sample size and across multiple organizations or industries to increase the extent to which the findings can be generalized. This would help in comparing how HR policies influence work culture in different organizational settings such as corporate, public sector, and startups.

In addition, future research may employ longitudinal approaches to study changes over time and examine how improvements in HR policies gradually impact work culture. Advanced statistical tools and techniques can also be used to provide deeper and more accurate analysis. In addition, qualitative methods such as

interviews and case studies can be incorporated to capture employee experiences and perceptions in more detail, providing richer insights into the relationship between HR policies and work culture.
